Abstract (en)
[origin: US4652478A] A multiple-layer flock transfer sheet patch (15) exhibits a flock layer (2) coated on its mounting surface (3) with a strongly adhering hot sealing adhesive layer (4) and detachably mounted, on its visible face (5), on a rigidifying carrier panel (7) by way of a slightly adhering adhesive layer (6). In order to make it possible to apply with accurate fit especially intricate and/or multicolored designs in a convenient fashion and without damaging the flock coating (2), and to be able to provide large flock fiber lengths even with a multicolored pattern of the designs, the carrier panel (7) is provided on its outside (8) with a strongly adhering layer (9) of hot sealing adhesive. In order to broaden the possibilities for utilizing the patch (15), the latter consists of two or several previously punched, flat pieces (16, 17, 18) joined by way of predetermined separating webs (19).
