Abstract (en)
[origin: WO8600950A1] A device for retaining snow and intended to be mounted on roofs or similar inclined surfaces comprises two section bars (12) spaced from each other and presenting at least one longitudinal wall (14) and connected by a web (11) extending between said walls. Said section bars (12) consist of hollow section bars and are extruded into a single piece with the web (11).
