Abstract (en)

[origin: WO8601438A1] The bottle comprises at its top part a spraying hole (6) and a dropwise dispensing hole (7) of larger cross-section, means being provided for the selection of the holes. The bottle has a flattened shape and two narrow opposite flat faces (2, 3); the spraying hole (6) and the dispensing hole (7) are respectively provided towards the top of each narrow face. The selection means comprise for each hole a shutter pusher (18, 19) translatingly movable in the direction of the large size of the corresponding face between a position where the associated hole is closed and another position where said hole is open.
