Abstract (en)
[origin: US4690424A] The underside of a heel holder is guided on a guide rail secured to the upper side of a ski. The guide rail has at least one set of toothed serrations associated with a locking member having corresponding counter serrations. The locking member can be pivoted about a transverse axis. The locking member projects beyond the heel holder toward the tail end of the ski and can be lifted against the force of a spring from and out of the locked position by means of a screw driver. After release by the screw driver, the locking member is swung by the spring into the locked position. A guard plate is provided for covering the teeth of the toothed serrations to prevent damage thereto by the screw driver.
