Abstract (en)
[origin: EP0190794A2] The plinth provided for a fitted refrigerator has an air inlet opening which is provided in the region above a plinth panel behind a furniture door of the refrigerator. The furniture door, in order to form an air supply region, lies at a distance in front of the plinth panel. The appliance plinth is raised at the front above the height of the furniture plinth and provided with profile parts. The air inlet opening is concealed by the furniture door and is not visible when the refrigerator door is closed. The plinth panel itself is not interrupted so that a continuous closed furniture plinth panel can be used in the fitted kitchen for all the fitted furniture. <IMAGE>
