Abstract (en)
[origin: EP0190846A2] A multi-colour printing apparatus comprises a vertically movable non-rotatable printing member, a support for ware to be decorated locatable in a position beneath the printing member and a plurality of transfer members disposed angularly around the central vertical axis of the printing member at a level between the printing member and the ware support. The transfer members are sequentially movable into positions between the printing member and the ware support to permit transfer of printed images from the transfer members to the printing member for subsequent application to ware mounted on the ware support.
