Abstract (en)

[origin: ES292247U] The mechanism comprises: a lever (8) pivotally mounted on a fixed pin (9) at one of the ends of the lever, a fork member (11) rotatively mounted on a pin (12) fixed to the lever (8), the fork member being adapted to receive a keeper (3) fixed to a center post of the body of the vehicle, this fork member (11) being provided with an elastically yieldable element (13) for returning it to its position in which it is disengaged from the keeper (3), a device (14) for locking the fork member (11) to the keeper (3) during the pivoting of the lever (8), the locking being effected before the pivoting of the lever, and a cam (17) rotatable about a fixed pin (18) and capable of being driven in rotation by a motor (10) which is automatically started up by the locking of the fork member (11) at the beginning of the closing travel of the door (1).
