Abstract (en)
[origin: EP0288968A2] The invention relates to a banding machine for banding linear objects by means of a banding element having engageable male and female members on both ends, which includes means for preventing drift of the banding element when it is being fed laterally or at the beginning of a banding operation, and means for supporting the banding element, disposed in the banding-element carrying passage, which supports the banding element in the course of being laterally fed.
