Abstract (en)
[origin: US4715163A] A large-format artificial brick has vertical air channels extending therethrough. Recesses on the ends of the brick and on the top and bottom of the brick form additional air circulating channels for a heating or cooling medium. In a building formed with such large-format bricks, a blower is located in the basement and connected to the vertical passages by a manifold. The bricks may be formed into a building by apparatus having a magazine for storing a stack of artificial bricks. A manipulator releases the bricks one at a time to form the building wall.
