Abstract (en)

The invention relates to papilloma viruses, particularly DNA-HPVs obtained from these papilloma viruses of respectively distinct types which can be correlated with disorders or potential disorders which are also distinct, or else probes containing these DNA-HPVs or fragments obtained therefrom. It also relates to kits containing these probes of distinct types or distinct groups of probes of the same type, and to a method of detecting and identifying papilloma viruses in biological samples by hybridation with the said probes with a view to the diagnosis of the nature of the disorder affecting the subject donating the biological sample, or disorders to which he runs the risk of being exposed.

Abstract (fr)

L'invention concerne des papillomavirus, particulièrement des ADN-HPVs obtenus à partir de ces papillomavirus de types respectivement distincts corrélables à des affections ou des potentialités d'affections également distinctes, ou encore des sondes contenant ces ADN-HPVs ou des fragments obtenus à partir de ceux-ci. Elle concerne en outre des nécessaires ou "kits" contenant ces sondes de types distincts, ou des groupes distincts de sondes appartenant au même type, ainsi qu'un procédé de détection et d'identification de papillomavirus dans des échantillons biologiques par hybridation avec lesdites sondes, en vue du diagnostic de la nature de l'affection dont souffre le sujet donneur de l'échantillon biologique, ou des affections auxquelles il risque d'être exposé.
