Abstract (en)
[origin: EP0192036A2] The tunnel section comprises an approximately U-shaped single-part shell which has limbs bent outwards at the free ends to form a flange and connection flanges at the end faces for connection to the adjacent shell, and a preferably transparent hood element which covers the shell and can be attached to the limbs of the shell, an elongated connector (14) being attachable to the two lateral flanges (12) of the shell (10), which connector has at the upper edge a receiving device (19) for the lower straight edge of the hood element (20). <IMAGE>
