Abstract (en)  
[origin: EP0192207A2] Veneer dryer for sliced veneers with two conveyor belts lying one above the other (6.1, 6.2) which within a drying chamber jointly run round at least four deflection devices (5) mainly in loop form, and run between two deflection devices (5) in a straight line along a section the length of which is so dimensioned that a veneer passed along this section can shrink freely, at least 40 % of the conveying section in the part fitted with deflection devices running round deflections, characterized by the fact that at least two successive groups of, in each two deflection devices arranged one above the other (5), the conveyor belts (6) along the conveying section being alternately wrapped round the deflection devices (5) of one group.
