Abstract (en)

There is disclosed a precision rolling mill which comprises a pair of forming rollers (1a, 1b) which cooperate to carry out finishing action on rolled steel strip, an eccentric shaft (2a, 2b) on which each roller is mounted, an integral support shaft (3a, 3b) projecting from each eccentric shaft, and axially movably mounted in a guide box (32), and a pair of threaded adjusters (6a, 6b; 17a, 17b) having push-type engagement with the outer ends of the eccentric shafts (2a, 2b) and the support shafts (3a, 3b). In order to enable precise adjustment to be made of the axial alignment of the rollers (1a, 1b), a reduction gear drive (16a, 15a, 18a, etc) is coupled with each of the threaded adjusters.
