Abstract (en)

A vacuum-suspended brake booster and master cylinder assembly is disclosed having a shorter overall length than heretofore, with the master cylinder primary piston (60) also acting as the booster reaction retainer and the push rod from the booster piston (24) to the master cylinder (12). This arrangement allows the rear portion of the master cylinder assembly to be positioned well back into the booster housing (14) for a reduced overall length of the brake booster and master cylinder assembly.
