Abstract (en)
[origin: US4696853A] This invention relates to a textile reinforcement process for making laminated complexes, of the type constituted for the major part by fibers extending transversely with respect to the length of said reinforcement, said yarns being joined together by a loose binding warp, wherein: the transverse yarns are disposed on a bias with respect to the length of the binding warp, and said binding warp is based on yarns which are at least superficially thermo-fusible.
