Abstract (en)  
[origin: EP0193523A2] A covering device for recesses (2) in tiled walls (1) has a tile cover (3) and a cover mounting (5) inserted into the recess (2), the tile cover (3) being assigned a handle (6) for opening. To make it possible to actuate the covering device easily at any time, the handle is a movable grip part (6) which is fastened to the tile cover (3) at the edge or rear and is of a width matched to the tiling joint thickness and which, with the tile cover (3) closed, can be moved from a position of use projecting from the edge joint (7) between the cover (3) and adjacent tiles into a position of rest extending within the edge joint.
