Abstract (en)

1. Connecting device of one end of shoe to a ski, wherein : * said shoe (2) includes at its tip one hooking part (1, 71) * one bearing or retaining part (3, 76) is intended to receive and cooperate with the said end of the shoe or of the corresponding hooking part (1, 71) * one removable latch (7, 51, 41, 60, 77) is pivotally mounted with respect to the ski (4) around a transversal pivot axis (8, 40, 61, 78), wherein the said latch is able to pivot between an inactive position of non-retention of the shoe and an active position of retention of the shoe, in which it is biased elastically by a spring system (9, 52, 45, 64, 83), characterized in that, in this active position of retention of the shoe, a relative play "e" is produced between the pivot axis and its housing.
