Abstract (en)

[origin: EP0194398A2] A box-table convertible into a bed comprises a box (1) having a tippable cover (5) fitted to the box (1) by means of a plate-like element (3) itself secured to the box (1) by a pair of pivotted arms (2) allowing the cover (5) to be lifted and tipped to form a bed head. Within the box body (1) is an articulated bed frame (9, 11, 16) formed in three parts which can be folded to a collapsed position and unfolded to an erected position. A first part (9) of the bed frame is connected to the box body (1) by a parallelogram linkage (6, 7, 8) whilst the second and third bed frame portions (11, 16) are each provided with a support frame (15, 17) linked to the bed frame portion by a respective linkage (14, 14 min ; 18, 18 min) which causes the support frame (15, 17) to be displaced between a folded position and an erected position automatically as the bed frame (9, 11, 16) is erected.
