Abstract (en)  
[origin: ES292884U] A modular terminal block with a plurality of modular terminals (1) which are arranged next to one another and can latch onto a carrier rail (3), and end angles (2) which bound the ends of the modular terminal block and can be mounted on the carrier rail (3), is designed according to the invention such that a securing pin (4) outside the region enclosed by the carrier rail (3) is attached to the end angles (2). A solution according to the invention provides that the securing pin (4) is inserted in laterally open cut-outs (6) on the left and right hand side of each modular terminal (1), while, if a cover is used, the securing pin is inserted in a seam provided in at least one limb of the cover.
