Abstract (en)

[origin: EP0194617A2] 1. Printing unit, in particular for an offset rotary printing machine, having a rubber blanket cylinder (3, 4) whose diameter is twice as large as the diameter of the associated plate cylinder (1, 2), so that two printed images (A, B) can be produced and can be clamped on the rubber blankets using support layers (5, 6, 11), characterised in that at least the support layer (5) associated with one printed image (e.g. B) has a region (8 or 10) of a thickness which is an increasing or decreasing wedge-shape in the circumferential direction (Fig. 2a or 2b).
