Abstract (en)  
[origin: GB2170958A] An antenna assembly comprises a central element 6 extending from a support 4, a plurality of resilient elements 8 extending from the support and arranged about the central element, and retaining means 10 for maintaining the distal ends of the resilient elements in juxtaposition to the central element, wherein the resilient elements 8 deploy, by bias stored therein, to operative positions about the central element when the distal ends thereof disengage the retaining means. <IMAGE>
