Abstract (en)  
[origin: WO8601699A1] The display cabinet comprises essentially downwardly inclined broaches (2) in its upper portion and upwardly inclined broaches (4) in its lower portion. The spaces (1 and 3) occupied by each type of broaches are separated and prolonged upwardly and downwardly respectively by a rearwardly inclined frontal (6), by a forwardly inclined frontal (10) and by an articulated frontal (13). The front ceiling portion of the lower space (3) is inclined rearwardly and the conditioned products arranged on the corresponding broaches (4) are brought back upwardly by means of springs (5). Each of the frontals is provided with complementary information means and may be used as an advertising medium.
