Abstract (en)
[origin: EP0195286A2] A base (24) is inserted removably in the circular-cylindrical attachment part (10) underneath the grating (13), with a drain channel which is segment-shaped, as seen in plan view, and which is closed off by an automatically acting flap (26). The flap opens automatically when there is a through flow and forms an odour trap which, in contrast to known odour traps, functions even in frost, with still water. <IMAGE>
