Abstract (en)

[origin: EP0195469A2] A weaving machine with improved feed for the woof thread, whereby the feed system consists primarily of the combination of at least two components (1-2; 11-12; 25-26); at least one detector to check the travel of the woof thread (5, 6) in the feed system; a drive unit (7) which, when the aforementioned detector detects a fault, cuts out one of the aforementioned components (1-2; 11-12; 25-26) and cuts in at least one other component of the feed system in its place, and a woof mechanism (3).
