Abstract (en)

[origin: EP0195771A2] 1. Means for applying binders, e.g. mortar, to building components laid in rows, the means comprising one or more sliding surfaces (1, 2), a region (5) for applying the binder and an edge (17) for stripping the binder (10) and disposed transversely to the direction of motion (11) of the means, and the binder application region (5) is separated at the rear end of the means by a guide plate (9), characterised in that the guide plate (9) is disposed at an acute angle to the sliding surface (1, 2) or to the plane (23) of the sliding surface, and the front region of the guide plate (9) is bent (20), the bent edge extends towards the front end, and the guide plate extends upwards and backwards.
