Abstract (en)

[origin: EP0195857A2] The invention relates to a process for the transfer of parts of a visually effective sheet onto a printable support. In a first process stage, an adhesive coating is applied to a surface shape corresponding to the desired printing result. In a second process stage, parts of the visually effective sheet are transferred to the area of the adhesive coating on the printable support. Such a process has all the advantages of the known blocking foil printing technique but, compared with this, is distinguished in particular by a substantially reduced technical outlay.
