Abstract (en)
[origin: EP0195915A2] A stacking device for stacking endless tabulating paper, comprising a slope conveyor (16) for conveying in an overlapping stream (20) the endless paper sheets coming from a processing machine, possesses after this slope conveyor an essentially vertically movable lifting table for the stacking reception of the endless paper sheets. At the downstream end of the slope conveyor (16) is a downwardly directed support plate (18), and on the side of the lifting table (24) located opposite the downstream end of the slope conveyor in a horizontal direction is an impact plate (32) movable towards the support surface (18) and away from this. <IMAGE>
