Abstract (en)
[origin: EP0195964A2] In a supporting element for the suspension of foil rolls, especially aluminium foil rolls, transported and stored on a laterally projecting winding tube, the transport and storage of the foil rolls become easier and, in particular, damage to the rolls is prevented. This is made possible by a supporting element made of expanded polystyrene with a foam weight of 80 to 85 g per litre, which has a cut-out (2) for receiving the winding tube. <IMAGE>
