Abstract (en)
[origin: US4659447A] Apparatus for producing a metallic deposit of constant thickness of elongated metal revolution parts. It comprises a plate mounted in rotary manner and having a plurality of height-regulatable rods distributed round a circle, each rod having a bore able to receive a threaded end of a part to be treated, a cover mounted around each rod and sliding thereon between a top position and a bottom position, as well as means for connecting each rod to the negative terminal of a direct current source.
