Abstract (en)

[origin: US4655259A] The weaving rotor for a series shed weaving machine is formed with picking combs which have lamellae of unitary structure to define a weft-guiding part and a warp-guiding part. The lamellae may be made of ceramic pressings with the two projections on the warp-guiding part being spaced apart to provide a relatively large entry zone for the insertion of the warp yarn.

Abstract (de)

Der Webrotor (1) für Reihenfachwebmaschinen weist Schussfadeneintragskämme (6) auf mit Lamellen (8), die Presslinge aus Keramik sind.
