Abstract (en)

[origin: EP0196446A1] 1. Joining arrangement, consisting of a reinforced concrete structure (1) and an additional part (2) of reinforced concrete, which can be directly connected together in a non-positive manner, while maintaining a prestressing force, by means of structural members, each structural member consisting of a tie rod (3), which passes right through the reinforced concrete structure (1) and at least partly through the additional part (2), a nut (6), which serves to apply the prestressing force and is supported at one of the reinforced concrete parts (1, 2), at one end of the tie rod (3), and a top plate (4), which is secured to the other end of the tie rod (3) and at which a spring member (13) is supported, which spring member is in turn supported at an annular flange (10) on the other concrete part (2), in the area of which the tie rod (3) is surrounded by an encasing tube (8).
