Abstract (en)
[origin: EP0196485A1] 1. A device for fixing a window frame or a door frame at a wall or another part of the building comprising a threaded sleeve eventually having an external hexagonal socket head and an internal hexagonal socket head which threaded sleeve is adapted to be passed through and screwed into a bore of the window frame or door frame and is supported at its distal end by the part of the building, and an anchor screw being insertable into the interior of the threaded sleeve, the anchor screw comprising a tapered supporting surface at the back side of the screw head, characterized in that the tapered supporting surface of the anchor screw is supported by a tapered supporting surface of an end of the integrally formed plastic threaded sleeve (14), which end is positioned adjacent to the frame, that the external thread (15) extends at least close to the outer supporting surface and that the anchor screw (25) is a wall anchor screw.
