Abstract (en)
A support apparatus primarily for supporting equipment for providing pelvic traction in the home and for clamping to an article of furniture. The apparatus comprises an elongate support 11 carrying thereon two opposed clamping plates 18, 19 one 19 or both of which are adapted to be moved towards or away from each other to clamp or release respectively the support to an article of furniture, means 14 to cause said movement being located at the one end of said support 11, normally remote from the plates 18, 19. An elongate extension 20 of said support 11 is provided to locate with and be locked to said support 11 in such manner as to conceal said means 14.
