Abstract (en)

[origin: FR2571384A1] The sheet metal to be treated (6) is fed to a primary high cooling flux area (4) which is regulated so as to bring the surface temperature of the sheet metal to the temperature range corresponding to the desired structure. The cooling is carried out by passing the sheet metal to a secondary moderated cooling flux area (5), which flux may be regulated, thereby maintaining the surface temperature to the desired level. Plant comprising a primary intense cooling area (4) and a secondary moderated cooling area (5).
