Abstract (en)
[origin: EP0198460A2] A switching unit 1 with a fuse is specified consisting of a housing 2 in which a switching arm 3 can be swivelled between a switched-on position and a switched-off position by means of an operating handle 4, the switching arm 3 being provided with a push-in channel for a fuse plug with a fuse insert. The switching unit 1 with a fuse is characterised in that, when the fuse plug is removed from the switching arm 3, a locking bolt 6 can be inserted and locked in the push-in channel to lock the switching arm 3 in its switched-off position and the push-in channel. In this way, the switching unit with a fuse is protected against misuse. <IMAGE>
