Abstract (en)
1. A multi-stage, fluid-sealed vacuum pump, having a housing and a separation plate (11) to form two drawing chambers as well as a rotor system comprising two rotors mounted on a common shaft and bearings for the rotor system, in which the rotor system is held in two front-side bearings (18, 19), characterised in that the ducting of the rotor system through the separation plate (11) is constructed as a per se known contactless split- and/or labyrinth packing (25), that the chambers in which the bearings (18, 19) of the rotor system are located are separated by means of packing rings (28, 29) and/or split- or labyrinth packings (31) from the associated drawing chambers (9, 13) and that the feed of the split- or labyrinth packings is provided by the sealing agent of the vacuum pump which is circulated in a cycle independent of the bearing frames.

Abstract (de)
Die Erfindung bezieht sich auf eine mehrstufige Vakuumpumpe mit einem Gehäuse und einer Trennscheibe (11) zur Bildung von zwei Schöpfräumen (9, 13) sowie mit einem Rotorsystem, das zwei gemeinsam auf einer Welle (17) angeordnete Rotoren (15, 16) und Lagerungen (18, 19) für das Rotorsystem umfaßt; zur Reduzierung von Schmierproblemen bei den Lagern wird auf eine Lagerung des Rotorsystems in der Trennscheibe (11) verzichtet; die Durchführung des Rotorsystems durch die Trennscheibe (11) ist als berührungsfreie Spalt- und/oder Labyrinthdichtung (25) ausgebildet.
