Abstract (en)

[origin: EP0198937A1] 1. Door leaf comprising at least two rebated parts (2, 3) which are arranged on the left and right longitudinal edges, respectively, of this door leaf and which are connected to a planar central part (1) by means of dowels (20), characterized in that both the rebated parts (2, 3) and the central part (1) have a plurality of dowel holes (9, 12) introduced at equal intervals (d), the sum of the depths (t1, or t2) of the dowel holes (9 or 12) in the central part (1) and in each rebated part (2 or 3) being greater than the length of the dowels (20) inserted for connection in such a manner that sufficient depth remains for receiving the dowels (20) even upon a reduction of the width of the door leaf adapted to suit the individual use.
