Abstract (en)
[origin: EP0199062A2] The invention relates to a cutting device according to German Offenlegungsschrift 3,334,165, in which, to improve the cutting to size of lightweight bodies having a honeycomb structure and complicated contours, the teeth on the cutting knife are made symmetrical and possess cutting edges pointing both in and opposite to the direction of rotation and rising and falling smoothly in relation to the circumference of the cutting knife. <IMAGE>
