Abstract (en)

[origin: EP0199080A2] The invention relates to a cassette for storing elongated articles, especially tools such as twist tools or the like, with a parallelepipedal container and an upwardly pivotable cover for the container. In the container for receiving the articles, there is also provided a first pivoting insert which is remote from the cover and which is mounted pivotably about a pivot axis parallel to the pivot axis of the cover and passing through the container and is automatically pivotable upwards upon opening of the cover. There is at least one second pivoting insert for receiving the articles, which is arranged between the cover and the first pivoting insert in the pivoting range of these two and which is mounted pivotably about a pivot axis parallel to the pivot axis of the cover and passing through the container. At least one connecting member is provided between the pivoting inserts and the cover. The connecting member extends through from the cover to the pivoting insert remote from the cover and at the same time passes through all the further pivoting inserts. <IMAGE>
