Abstract (en)
[origin: EP0199144A2] Ironing device for a hair dryer, comprising an air-guiding plate with a tube body and an ironing plate spaced apart from the air-guiding plate. The hair dryer is connected to the ironing device via a tube body and the air stream produced by the hair dryer is used for heating up the ironing plate. The air stream from the hair dryer may not have a uniform temperature over the cross-section. For this reason it is proposed that air-guiding means for the air stream be provided in the tube body. <IMAGE>
