Abstract (en)

[origin: EP0200018A2] The folding box (1) has a swivellable and reclosable pouring spout (25) which consists of a pouring flap (26) and at least one flap side wall (27) which is connected to the latter and can be partially pulled out of the folding box (1) when the pouring flap (26) is opened. Means are provided for bounding the swivel angle of the pouring spout (25). The folding box (1) is to be designed in such a way that it can be produced in a simpler and less expensive manner. This is achieved in that, apart from the pouring flap (26), the flap side wall (27) and the means (49) for bounding the swivel angle are also part of the folding box blank in such a way that the folding box blank is formed in one part. Furthermore, measures are proposed which facilitate handling when the pouring spout is opened and closed and/or when the contents are poured out. <IMAGE>
