Abstract (en)
[origin: WO8602991A1] A device for fixing to a support wall a fibre insulation element comprises a metal part (1) consisting of a first portion (2, 3) capable of penetrating into the module (11) according to a direction parallel to the support wall, preferably like the tines of a fork, and of a second portion (8, 9, 10) which may co-operate with a hooking member (screw, bolt etc...) fixed to the support wall, and of a third portion (4-7) which connects the first two portions and which may co-operate with the end of a similar metal part which has traversed an adjacent element.
