Abstract (en)

[origin: ES294041U] A connecting arrangement comprises a crimp barrel which is crimped against the outer conductor of a coaxial cable and contains a shield wire to be connected to a wrap post of a terminal strip, and a holding device which engages the cable over the edge of the terminal strip board. Two clips are integrally formed on the ends of the holding device. One of the clips clasps the outer diameter of the coaxial cable below the strip board, and the other clip surrounds the insulated inner conductor of the coaxial cable above the strip board.
