Abstract (en)
[origin: EP0201091A2] This lamp has an electrical switch and a low-voltage halogen lamp which can be plugged into a holder, which can both be accommodated in a lamp housing which can be connected to a low-voltage current rail. An extremely low constructional height perpendicularly to the direction of plugging-in can be achieved by a special type of construction of the plug-in part with the connection contacts and the locking elements. A specially constructed switching system for switching-on and -off is accommodated in the lamp housing and the low-voltage halogen lamp can be easily accessed in spite of the contact-protected cover due to a special compartmentation of the lamp housing.
