Abstract (en)
1. A projectile intended to attack armored and especially active targets, composed of a warhead including a leading shaped-charge unit (2) and a trailing shaped charge unit (1) arranged in tandem and detonating in sequence, on the one hand, and of a propel lent charge, on the other hand, characterized in that it incorporates a protective screen constituted by the propellent charge (9) itself, placed between the two units (1, 2), which is fitted with an axial recess making way for the jet of the trailing shaped-charge unit (1).

Abstract (fr)
Le secteur technique de l'invention est celui des projectiles antichar. Le projectile selon l'invention est constitué par une charge explosive formée arrière 1 dite charge principale, par une charge explosive explosive formée avant 2 dite charge secondaire et par un propulseur 9 disposé entre les deux charges formées. Le projectile comprend de plus: des moyens de détection 4, d'alimentation électrique 5 et des moyens de guidage 3 disposés en couronne autour de la charge avant 2. Application à la perforation des blindages notamment actifs.
