Abstract (en)
[origin: EP0201769A2] For rolling up suction hoses (5) for motor vehicles, there are known hose reels (2) which are arranged above the work station and on the reel body (6) of which the suction hose (5) is rolled. So that the suction hose (5) is laid round the reel casing with turns resting against one another, its outer surface (3) is provided with helically continuous grooves (4). These grooves (4) receive the suction hose (5) which therefore cannot be pinched or damaged. <IMAGE>
