Abstract (en)

[origin: EP0201779A2] To crimp artificial hair made of synthetic monofilament fibres in order to make hairpieces, the artificial hair is, at 118 DEG C or higher, a) crimped with water vapour-saturated hot air or b) admixed with a moisture-holding agent and crimped with hot air at from 150 DEG to 180 DEG and c) crimped in an autoclave in the region between wet steam and saturated steam. The advantage achieved here is that reshaping of the hair is possible without embrittlement and that good colourability and also colour fastness in relation to light and washing are obtained. <IMAGE>
