Abstract (en)

[origin: EP0202442A2] 1. Device for controlling the heating element in a binding device for the binding of loose sheets in covers, which are provided with a thermoplastic adhesive on their spine, with a switch for switching on the heating element and with a timer, which can be switched on at a high temperature at the beginning of the binding cycle and which indicates the end of the binding cycle by means of a signal, characterized in that, to detect the temperature of the heating element, a temperature sensor is provided, which is connected via an electronic circuit to the timer in such a manner that it switches the timer on automatically and only when the heating element is at or above a given, high temperature.
