Abstract (en)
[origin: EP0202612A2] A glued laminated girder is proposed with outer weather boards made of solid wood, which is characterised in that chipboard strips of high-strength quality, glued to one another, are arranged in the middle layers instead of solid-wood board. Alternatively, the girder can also consist of glued chipboards which stand on edge and are glued to one or more layers of boards or the like only on the underside of the girder. For specific intended uses, it is also possible to use a girder which consists only of a single glued on-edge block of high-strength chipboards.
