Abstract (en)  
Cable tensioner with two clamping units (101, 102), which can move relative to one another and are opened and closed in opposite phase, the cable tensioner (15) being designed as a compact unit, driven by a pressure medium, in whose interior the two clamping units (101, 102) and an operating cylinder (103) moving the said units relative to one another are arranged, each of the clamping units (101, 102) being provided with at least one clamping device (104) and at least one operating cylinder (105; 106) connected to the clamping device (Figure 1). <IMAGE>

Abstract (de)  
Seilspanner nach mit zwei relativ zueinander bewegbaren, in Gegenphase geöffneten und geschlossenen Klemmeinheiten (101, 102), wobei der Seilspanner (15) als kompakte, mit Druckmedium betriebene Einheit ausgebildet ist, in deren Inneren die beiden Klemmeinheiten (101, 102) und ein diese relativ zueinander bewegendes Arbeitszylinder (103) angeordnet sind, wobei jede der Klemmeinheiten (101, 102) mit mindestens einer Klemmvorrichtung (104) und mindestens einem an die Klemmvorrichtung angeschlossenen Arbeitszylinder (105; 106) versehen ist.
